# DRAIN-JET ROBOTICS®

MOBILE  
ULTRA-HIGH PRESSURE  
WATER JET TECHNOLOGY

powered by

MAUER

SPECHT®

*the Original*

Produced by Mauerspecht GmbH

Using maximum-pressure water-jet ultra-high pressure water jet up to 2,500 bar Drain-Jet Robotics® quickly and thoroughly removes the following in sewers:

- INCRUSTATIONS, LIMESCALE AND CONCRETE DEPOSITS
- ROOTS
- FOREIGN BODIES MADE OF STEEL AND REINFORCED CONCRETE
- GRP HOSE LINERS AND NEEDLE FELT LINERS
- BITUMEN AND FATS

We have German and international proprietary rights in relation to the technology of the robot-guided ultra-high pressure water jet in the sewer. Our ultra-high pressure water jet technology works robotsupported, monitored by camera and you can adjust the driving speed in the sewers as well as the water pressure to your needs from 100 up to 1,500 bar (in special cases up to 2,500 bar). The robot technology can be used in sewage drains and rainwater pipelines from DN 150 right up to accessible sewers. Furthermore, use is realisable in all known profiles.
